Description

Recombinant CD14 Antibody LPSR/4180R detects CD14, a receptor for endotoxin and apoptotic cells. It is expressed by monocytes/histiocytes, Langerhans cell histiocytosis and giant cell tumor. In cultures, a subpopulation of Kaposi sarcoma cells express CD14. In differential diagnosis, CD14 is more specific than CD68 in the identification of monocytes/histiocytes and associated neoplasias.

For an alternative antibody targeting the same monocyte and macrophage surface marker, see our CD14 Antibody LPSR/2385, a mouse monoclonal antibody featuring IHC, western blot, flow cytometry, and protein microarray validation.

Application Notes

Optimal dilution of the Recombinant CD14 Antibody LPSR/4180R should be determined by the researcher.

Immunogen

A portion of amino acids 1-100 from the human protein was used as the immunogen for the Recombinant CD14 Antibody LPSR/4180R.

Storage

Store the recombinant CD14 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
