## Description

This MAb reacts with an extracellular domain (close to transmembrane) of CD56/NCAM. Three isoforms of neural cell adhesion molecule (NCAM) are produced by differential splicing of the RNA transcript from a single gene. The 135kDa isoform is the basic molecule, which is glycosylated or sialylated to produce the mature species. Anti-CD56 recognizes two proteins of the neural cell adhesion molecule, the basic molecule expressed on most neuroectodermally derived tissues and neoplasms (e.g. retinoblastoma, medulloblastomas, astrocytomas, neuroblastomas, and small cell carcinomas). It is also expressed on some mesodermally derived tumors (rhabdomyosarcoma). Anti-CD56 plays an important role in the diagnosis of nodal and nasal NK/T-cell lymphomas.

## Application Notes

Optimal dilution of the recombinant CD56 antibody should be determined by the researcher.

## Immunogen

A recombinant fragment (within amino acids 200-400) of human NCAM1/CD56 protein was used as the immunogen for the recombinant CD56 antibody.

## Storage

Aliquot the recombinant CD56 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
