Description

This MAb recognizes a 27kDa protein called p27Kip1/CDKN1B/Cyclin-dependent kinase inhibitor 1B, a cell cycle regulatory mitotic inhibitor. It is highly specific and shows no cross-reaction with other related mitotic inhibitors. p27Kip1 functions as a negative regulator of G1 progression and has been proposed to function as a possible mediator of TGF-induced G1 arrest. p27Kip1 is a candidate tumor suppressor gene. This MAb is excellent for staining of formalin-fixed tissues.

Application Notes

Optimal dilution of the recombinant CDKN1B antibody should be determined by the researcher.

Immunogen

A recombinant human CDKN1B protein was used as the immunogen for the recombinant CDKN1B antibody.

Storage

Aliquot the recombinant CDKN1B antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
