## Description

Recombinant Cytokeratin 10 Antibody KRT10/1990R recognizes a protein of 56.5kDa, identified as cytokeratin 10 (CK10). CK10 is expressed in all suprabasal layers of the epidermis. In the epidermis, expression of CK10 strictly parallels the extent of differentiation; it is absent in the basal layer, appears in the first suprabasal layers and increases in concentration towards the granular layer. However, CK10 is rarely detected in early stages of vulvar squamous carcinomas (tumors less than 2 cm, clinical stage I) regardless of the tumor grade. In larger and more advanced tumors (greater than 2 cm, clinical stages II and III), CK10 is detected very frequently. Expression of CK10 is related to maturation of malignant keratinocytes, being preferentially detected in more-differentiated parts.

## Application Notes

Optimal dilution of the Recombinant Cytokeratin 10 Antibody KRT10/1990R should be determined by the researcher.
1. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.

## Immunogen

Skin extract from a Psoriasis patient was used as the immunogen for the Recombinant Cytokeratin 10 Antibody KRT10/1990R.

## Storage

Store the Recombinant Cytokeratin 10 Antibody KRT10/1990R at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
