### Description

This cytokine is produced by activated macrophages as a proprotein, which is proteolytically processed to its active form

by caspase 1 (CASP1/ICE). This cytokine is an important mediator of the inflammatory response, and is involved in a variety of cellular activities, including cell proliferation, differentiation, and apoptosis. The induction of cyclooxygenase-2 (PTGS2/COX2) by this cytokine in the central nervous system (CNS) is found to contribute to inflammatory pain hypersensitivity. This gene and eight other interleukin 1 family genes form a cytokine gene cluster on chromosome 2.

## **Application Notes**

Optimal dilution of the recombinant IL1 beta antibody should be determined by the researcher.

## **Immunogen**

A recombinant protein fragment was used as the immunogen for the recombinant IL1 beta antibody.

## **Storage**

Aliquot the recombinant IL1 beta antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
