Description

Napsin is a pepsin-like aspartic proteinase connected with maturation of surfactant protein B. There are two closely related napsins, napsin A and napsin B. Napsin A is expressed as a single chain protein. Immunohistochemical studies revealed high expression levels of napsin A in human lung and kidney but low expression in spleen. Napsin A is expressed in type II pneumocytes and in adenocarcinomas of lung. The high specificity expression of napsin A in adenocarcinomas of lung is useful to distinguish primary lung adenocarcinomas from adenocarcinomas of other organs.

Application Notes

Optimal dilution of the recombinant Napsin A antibody should be determined by the researcher.

Immunogen

A portion of amino acids1-100 was used as the immunogen for the recombinant Napsin A antibody.

Storage

Aliquot the recombinant Napsin A antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
