## Description

Recognizes a 53kDa protein, identified as the Ornithine Decarboxylase (ODC-1). ODC is the initial and rate-limiting enzyme in the biosynthetic pathway of polyamines and is involved in the conversion of ornithine to putrescine. The biological activity of ODC-1 is rapidly induced in response to virtually all agents known to promote cell proliferation including hormones, drugs, growth factors, mitogens, and tumor promoters. Reportedly, ODC mRNA levels are elevated in lung carcinomas as well as in colon adenomas and carcinomas. ODC activity in colorectal carcinomas is greater than those in adenomas and normal mucosa.

## Application Notes

Optimal dilution of the recombinant ODC1 antibody should be determined by the researcher.

## Immunogen

Recombinant human ODC-1 protein was used as the immunogen for this recombinant ODC1 antibody.

## Storage

Store the recombinant ODC1 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
