Description

Prolactin is a growth factor that is secreted by the anterior pituitary. It is necessary for the proliferation and differentiation of the mammary glands. Prolactin is useful in the classification of pituitary tumors and study of pituitary disease. It also plays a role in the development of mammary cancer, functioning dually as a mitogen and a differentiating agent.

Application Notes

Optimal dilution of the recombinant Prolactin antibody should be determined by the researcher.

Immunogen

A portion of amino acids 63-201 was used as the immunogen for the recombinant Prolactin antibody.

Storage

Aliquot the recombinant Prolactin antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
