## Description

TIMP2 is a member of the TIMP gene family. The proteins encoded by this gene family are natural inhibitors of the matrix metalloproteinases, a group of peptidases involved in degradation of the extracellular matrix. In addition to an inhibitory role against metalloproteinases, Metalloproteinase inhibitor 2 / TIMP2 has a unique role among TIMP family members in its ability to directly suppress the proliferation of endothelial cells. As a result, it may be critical to the maintenance of tissue homeostasis by suppressing the proliferation of quiescent tissues in response to angiogenic factors, and by inhibiting protease activity in tissues undergoing remodelling of the extracellular matrix. ## Application Notes

Optimal dilution of the recombinant TIMP2 antibody should be determined by the researcher.

1. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.

## Immunogen

Amino acids 56-66 (DSGNDIYGNPI) from the human protein were used as the immunogen for this recombinant TIMP2 antibody.

## Storage

Store the recombinant TIMP2 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
