## Description

Key players in the Notch pathway are the TLE genes, which are human homologs of the *Drosophila* groucho gene. Groucho is a transcriptional repressor that plays a key role in neurogenesis, segmentation and sex determination. Transducin-like enhancer protein1 (TLE1) is a protein that is encoded by the TLE1 gene and is involved in control of hematopoiesis, neuronal, and terminal epithelial differentiation. Positive immunohistochemical nuclear staining with anti-TLE-1 has been shown to be a useful addition to an IHC panel when differentiating synovial sarcoma from other soft tissue malignancies.

## Application Notes

Optimal dilution of the recombinant TLE1 antibody should be determined by the researcher.

## Immunogen

A recombinant full-length human TLE1 protein was used as the immunogen for the recombinant TLE1 antibody.

## Storage

Aliquot the recombinant TLE1 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
