| Purity | Protein A/G affinity |
| UniProt | P16473 |
| Localization | Cytoplasm, Cell membrane |
| Applications | Immunohistochemistry (FFPE) : 1-2ug/ml |
| Limitations | This recombinant TSH Receptor antibody is available for research use only. |

IHC staining of FFPE human thyroid tissue with recombinant TSH Receptor antibody (clone TSHRB/1607R). HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

SDS-PAGE analysis of purified recombinant TSH Receptor antibody (clone TSHRB/1607R) as confirmation of integrity and purity.

Description

Thyroid-stimulating hormone (TSH, also known as thyrotropin) is a glycoprotein involved in the control of thyroid structure and metabolism, which stimulates the release of the thyroid hormones. TSH is regulated by thyroid hormone (T3) and various retinoid compounds. TSH binds to the thyroid-stimulating hormone receptor (TSHR), which is cleaved into two subunits, A and B, and plays a major role in regulating thyroid function. The third cytoplasmic loop of TSHR has been identified as critical for its role in regulating inositol phosphate and cAMP formation. In Grave's disease, an autoimmune disorder, TSHR is activated by autoantibodies, which may be stimulated by the cleavage of the A and B subunits.

Application Notes

Optimal dilution of the recombinant TSH Receptor antibody should be determined by the researcher.

Immunogen

Recombinant human TSHR B-Chain protein was used as the immunogen for the recombinant TSH Receptor antibody.

Storage

Aliquot the recombinant TSH Receptor antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
