Description

RIO kinase 2 (RIOK2) is a member of the RIO family of atypical serine protein kinases first characterized in yeast. There are three RIO kinase subfamilies: RIO1, RIO2, and RIO3. RIOK1 and RIOK2 proteins are present in organisms from Archaea to humans. Studies of RIO kinases in yeast indicate that they play a role in ribosome biogenesis. Human RIOK2 has been shown to be a part of a late 40S pre-ribosomal particle and have influence on 40S maturation.

Application Notes

Optimal dilution of the RIO2 antibody should be determined by the researcher.

Immunogen

E. coli-derived recombinant human protein (amino acids D16-L283) was used as the immunogen for the RIO2 antibody.

Storage

After reconstitution, the RIO2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
