RNF41 antibody western blot analysis in 293 lysate.

Description

The protein encoded by this gene contains a RING finger, a motif present in a variety of functionally distinct proteins and known to be involved in protein-protein and protein-DNA interactions. The specific function of this protein has not yet been determined. Three alternatively spliced transcript variants encoding two distinct isoforms have been reported. [provided by RefSeq].

Application Notes

Titration of the RNF41 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 255-281 from the human protein was used as the immunogen for this RNF41 antibody.

Storage

Aliquot the RNF41 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
