Description

Ras-responsive element-binding protein 1 is a protein that in humans is encoded by the RREB1 gene. The protein encoded by this gene is a zinc finger transcription factor that binds to RAS-responsive elements (RREs) of gene promoters. It has been shown that the calcitonin gene promoter contains an RRE and that the encoded protein binds there and increases expression of calcitonin, which may be involved in Ras/Raf-mediated cell differentiation. Multiple transcript variants encoding several different isoforms have been found for this gene.

Application Notes

Optimal dilution of the RREB1 antibody should be determined by the researcher.

Immunogen

E. coli-derived recombinant human protein (amino acids K732-Q1559) was used as the immunogen for the RREB1 antibody.

Storage

After reconstitution, the RREB1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
