## Description

Ribosomal RNA-processing protein 8 is a protein that in humans is encoded by the RRP8 gene. Enables methylated histone binding activity. Involved in several processes, including cellular response to glucose starvation; intrinsic apoptotic signaling pathway by p53 class mediator; and regulation of gene expression. Located in several cellular components, including cytosol; nuclear lumen; and rDNA heterochromatin. Part of chromatin silencing complex.

## Application Notes

Optimal dilution of the RRP8 antibody should be determined by the researcher.

## Immunogen

E. coli-derived recombinant human protein (amino acids K199-R456) was used as the immunogen for the RRP8 antibody.

## Storage

After reconstitution, the RRP8 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
