## Description

S100A2 belongs to the S100 family of proteins containing 2 EF-hand calcium-binding motifs. S100A2 may function as a modulator against excess calcium accumulation in normal human mammary epithelial cells and also have a role in suppressing tumor cell growth. This protein may have a tumor suppressor function. Chromosomal rearrangements and altered expression of this gene have been implicated in breast cancer. Cytoplasmic overexpression may also be of prognostic significance when observed in oral cancer patients, and the S100A2 has also been identified as significantly down regulated in gastric cancer.

## Application Notes

Optimal dilution of the S100A2 antibody should be determined by the researcher.

## Immunogen

Recombinant full-length human protein was used as the immunogen for the S100A2 antibody.

## Storage

Aliquot the S100A2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
