Description

Uteroglobin, also known as secretoglobin family 1A member 1 (SCGB1A1), is a protein that in humans is encoded by the SCGB1A1 gene. This gene encodes a member of the secretoglobin family of small secreted proteins. The encoded protein has been implicated in numerous functions including anti-inflammation, inhibition of phospholipase A2 and the sequestering of hydrophobic ligands. Defects in this gene are associated with a susceptibility to asthma.

Application Notes

Optimal dilution of the Scgb1a1 antibody should be determined by the researcher.

Immunogen

A recombinant mouse partial protein corresponding to amino acids D22-F96 was used as the immunogen for the Scgb1a1 antibody.

Storage

After reconstitution, the Scgb1a1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
