Flow testing of fixed and permeabilized human U-87 MG cells with SCN1A antibody (green) and isotype control (blue).

Description

Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions may pass in accordance with their electrochemical gradient.

Application Notes

The stated application concentrations are suggested starting points. Titration of the SCN1A antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids from human SCN1A was used as the immunogen for the SCN1A antibody.

Storage

Aliquot the SCN1A antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
