## Description

Protein transport protein Sec23B is a protein that in humans is encoded by the SEC23B gene. The protein encoded by this gene is a member of the SEC23 subfamily of the SEC23/SEC24 family, which is involved in vesicle trafficking. The encoded protein has similarity to yeast Sec23p component of COPII. COPII is the coat protein complex responsible for vesicle budding from the ER. The function of this gene product has been implicated in cargo selection and concentration. Multiple alternatively spliced transcript variants have been identified in this gene.

## Application Notes

Optimal dilution of the SEC23B antibody should be determined by the researcher.

## Immunogen

Recombinant human protein (amino acids R190-Q581) was used as the immunogen for the SEC23B antibody.

## Storage

After reconstitution, the SEC23B antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
