### **Description**

Protein transport protein Sec24C is a protein that in humans is encoded by the SEC24C gene. The protein encoded by this gene is a member of the SEC24 subfamily of the SEC23/SEC24 family, which is involved in vesicle trafficking. The encoded protein has similarity to yeast Sec24p component of COPII. COPII is the coat protein complex responsible for vesicle budding from the ER. The product of this gene may play a role in shaping the vesicle, as well as in cargo selection and concentration. Alternatively spliced transcript variants encoding the same protein have been identified.

#### **Application Notes**

Optimal dilution of the SEC24C antibody should be determined by the researcher.

#### **Immunogen**

E. coli-derived recombinant human protein (amino acids L178-R1033) was used as the immunogen for the SEC24C antibody.

#### **Storage**

After reconstitution, the SEC24C antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
