Description

Septin 12 is a protein that in humans is encoded by the SEPT12 gene. This gene encodes a guanine-nucleotide binding protein and member of the septin family of cytoskeletal GTPases. Septins play important roles in cytokinesis, exocytosis, embryonic development, and membrane dynamics. Multiple transcript variants encoding different isoforms have been found for this gene.

Application Notes

Optimal dilution of the SEPT12 antibody should be determined by the researcher.

Immunogen

E. coli-derived recombinant human protein (amino acids K71-F358) was used as the immunogen for the SEPT12 antibody.

Storage

After reconstitution, the SEPT12 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
