Description

Secreted frizzled-related protein 5 (SFRP5) is a member of the SFRP family that contains a cysteine-rich domain homologous to the putative Wnt-binding site of Frizzled proteins. SFRPs act as soluble modulators of Wnt signaling. SFRP5 and SFRP1 may be involved in determining the polarity of photoreceptor cells in the retina. SFRP5 is highly expressed in the retinal pigment epithelium, and moderately expressed in the pancreas. [provided by RefSeq].

Application Notes

The stated application concentrations are suggested starting points. Titration of the SFRP5 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 190-219 from the human protein were used as the immunogen for the SFRP5 antibody.

Storage

Aliquot the SFRP5 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
