Description

Endophilin-A1 is a protein that in humans is encoded by the SH3GL2 gene. Endophilins are involved in many cellular mechanisms, such as synaptic vesicle recycling, receptor trafficking, and membrane remodeling processes.

Application Notes

Optimal dilution of the SH3GL2 antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids R65-Q292) was used as the immunogen for the SH3GL2 antibody.

Storage

After reconstitution, the SH3GL2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
