## Description

SLAIN1 is a novel stem cell protein that was identified by transcriptional profiling of mouse and human embryonic stem cells (ESCs) and is expressed at the stem cell and epiblast stages. Unlike its more widely expressed homolog SLAIN2, SLAIN1 was found to be expressed in the epiblast, nervous system, tailbud and somites of the developing mouse embryo. Later experiments suggested that SLAIN1 may play a role in the development of the nervous system as well as in the morphogenesis of several embryonic structures.

## Application Notes

Optimal dilution of the SLAIN1 antibody should be determined by the researcher.

## Immunogen

An E.coli-derived human recombinant protein (amino acids E200-Y568) was used as the immunogen for the SLAIN1 antibody.

## Storage

After reconstitution, the SLAIN1 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
