Description

Solute carrier family 7 member 7, also called Y+L amino acid transporter 1 or YLAT1, is involved in the sodium-independent uptake of dibasic amino acids and sodium-dependent uptake of some neutral amino acids. Requires coexpression with SLC3A2/4F2hc to mediate the uptake of arginine, leucine and glutamine. Plays a role in nitric oxide synthesis in human umbilical vein endothelial cells (HUVECs) via transport of L-arginine. Involved in the transport of L-arginine in monocytes. [UniProt]

Application Notes

Optimal dilution of the SLC7A7 antibody should be determined by the researcher.

Immunogen

Amino acids SQPEVETSPLGD (N-Terminal) were used as the immunogen for this SLC7A7 antibody.

Storage

Aliquot and store the SLC7A7 antibody at -20oC.
