## Description

E3 ubiquitin-protein ligase SMURF2 is an enzyme that in humans is encoded by the SMURF2 gene. The SMURF2 gene is mapped to chromosome 17q22-q23 based on sequence similarity between the SMURF2 sequence and a genomic contig. SMURF2 is a HECT domain E3 ubiquitin ligase involved in degradation of SMADs, TGF-beta receptor (TGFB $\beta$ ), and other substrates. It also functions in regulation of neuronal and planar cell polarity, induction of senescence, and tumor suppression.

## Application Notes

Optimal dilution of the SMURF2 antibody should be determined by the researcher.

## Immunogen

A human recombinant protein (amino acids W303-Q387) was used as the immunogen for the SMURF2 antibody.

## Storage

After reconstitution, the SMURF2 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
