## Description

SOD2 is a member of the iron/manganese superoxide dismutase family. It is a mitochondrial protein that forms a homotetramer and binds one manganese ion per subunit. This protein binds to the superoxide byproducts of oxidative phosphorylation and converts them to hydrogen peroxide and diatomic oxygen. Mutations in this gene have been associated with idiopathic cardiomyopathy (IDC), premature aging, sporadic motor neuron disease, and cancer.

## Application Notes

Titration of the SOD2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

This SOD2 antibody was produced from rabbits immunized with human recombinant SD protein.

## Storage

Aliquot the SOD2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
