Description

SRF is a transcription factor that binds to the serum response element (SRE), a short sequence of dyad symmetry located 300 bp to the 5' of the site of transcription initiation of some genes (such as FOS) (By similarity). Required for cardiac differentiation and maturation.

Application Notes

Titration of the Srf antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

This Srf antibody was produced from a rabbit immunized with a KLH conjugated synthetic peptide between 489-524 amino acids from the C-terminal region of mouse Srf.

Storage

Aliquot the Srf antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
