Description

T-cell acute lymphocytic leukemia protein 1 is a protein that in humans is encoded by the TAL1 gene. The protein encoded by TAL1 is a basic helix-loop-helix transcription factor. TAL1 is a transcriptionally complex gene that is expressed throughout development, activating or repressing transcription in hematopoietic, neural, and endothelial precursors. This gene is mapped to chromosome 1p33.

Application Notes

Optimal dilution of the TAL1 antibody should be determined by the researcher.

Immunogen

A recombinant human partial protein corresponding to amino acids Y174-D259 was used as the immunogen for the TAL1 antibody.

Storage

After reconstitution, the TAL1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
