### Description

Transcriptional enhancer factor TEF-5 is a protein that in humans is encoded by the TEAD3 gene. This gene product is a member of the transcriptional enhancer factor (TEF) family of transcription factors, which contain the TEA/ATTS DNA-binding domain. It is predominantly expressed in the placenta and is involved in the transactivation of the chorionic somatomammotropin-B gene enhancer. Translation of this protein is initiated at a non-AUG (AUA) start codon.

### Application Notes

Optimal dilution of the Tead3 antibody should be determined by the researcher.

## **Immunogen**

Amino acids RKKVREYQVGIKAMNLDQ were used as the immunogen for the Tead3 antibody.

## **Storage**

After reconstitution, the Tead3 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
