Description

The TGOLN2 gene encodes a type I integral membrane protein that is localized to the trans-Golgi network, a major sorting station for secretory and membrane proteins. The encoded protein cycles between early endosomes and the trans-Golgi network, and may play a role in exocytic vesicle formation. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [RefSeq]

Application Notes

Optimal dilution of the TGN46 antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human TGN46 / TGOLN2 was used as the immunogen for the TGN46 antibody.

Storage

Store the TGN46 antibody at -20oC.
