Description

Cilia are dynamic signaling organelles essential for developmental patterning, including left-right specification, skeletal formation, neural development, and organogenesis. TMEM107 is predicted to be critical for cilia formation and signaling in a subset of embryonic tissues. Based on an alignment of the TMEM107 sequence with the genomic sequence (GRCh38), the gene was mapped to chromosome 17p13.1.

Application Notes

Optimal dilution of the TMEM107 antibody should be determined by the researcher.

Immunogen

Amino acids 22-57 (VITLFWSRDSNIQACLPLTFTPEEYDKQDIQLVAAL) from the human protein were used as the immunogen for the TMEM107 antibody.

Storage

After reconstitution, the TMEM107 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
