Description

Three prime repair exonuclease 2 is an enzyme that in humans is encoded by the TREX2 gene. By genomic sequence analysis, the TREX2 gene is mapped to chromosome Xq28. This gene encodes a protein with 3' exonuclease activity. Enzymes with this activity are involved in DNA replication, repair, and recombination. Similarity to an E. coli protein suggests that this enzyme may be a subunit of DNA polymerase III, which does not have intrinsic exonuclease activity.

Application Notes

Differences in protocols and secondary/substrate sensitivity may require the TREX2 antibody to be titrated for optimal performance.

Immunogen

Amino acids E69-A279 from the human protein were used as the immunogen for the TREX2 antibody.

Storage

After reconstitution, the TREX2 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
