IHC testing of FFPE human esophageal carcinoma and TRIM29 antibody (clone TPMP29-1). FFPE testing requires sections to be boiled in pH 9 10mM Tris with 1mM EDTA for 10-20 minutes, followed by cooling at RT for 20 minutes, prior to staining.

IHC testing of FFPE human lung squamous cell carcinoma and TRIM29 antibody (clone TPMP29-1). FFPE testing requires sections to be boiled in pH 9 10mM Tris with 1mM EDTA for 10-20 minutes, followed by cooling at RT for 20 minutes, prior to staining.

## Description

Tripartite motif-containing protein 29 interacts with the intermediate filament protein vimentin, a substrate for the PKC family of protein kinases, and with hPKCI-1, an inhibitor of the PKCs. TRIM29 protein contains both zinc finger and leucine zipper motifs, suggesting that it may form homodimers and possibly associate with DNA.

## Application Notes

Titering of the TRIM29 antibody may be required for optimal performance.

1. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.

## Immunogen

An N-terminal human recombinant protein fragment was used as the immunogen for the TRIM29 antibody.

## Storage

Store the TRIM29 antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
