Description

Zinc finger transcription factor Trps1 is a protein that in humans is encoded by the TRPS1 gene. This gene encodes a transcription factor that represses GATA-regulated genes and binds to a dynein light chain protein. Binding of the encoded protein to the dynein light chain protein affects binding to GATA consensus sequences and suppresses its transcriptional activity. Defects in this gene are a cause of tricho-rhino-phalangeal syndrome (TRPS) types I-III.

Application Notes

Optimal dilution of the TRPS1 antibody should be determined by the researcher.

Immunogen

E. coli-derived recombinant human protein (amino acids H353-D1257) was used as the immunogen for the TRPS1 antibody.

Storage

After reconstitution, the TRPS1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
