Description

This gene is a member of the transient receptor family and the TrpV subfamily. The calcium-selective channel encoded by this gene has 6 transmembrane-spanning domains, multiple potential phosphorylation sites, an N-linked glycosylation site, and 5 ANK repeats. This protein forms homotetramers or heterotetramers and is activated by a low internal calcium level.

Application Notes

Titration of the TRPV5 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 634-663 from the human protein was used as the immunogen for this TRPV5 antibody.

Storage

Aliquot the TRPV5 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
