Description

Component of the ESCRT-I complex, a regulator of vesicular trafficking process. Binds to ubiquitinated cargo proteins and is required for the sorting of endocytic ubiquitinated cargos into multivesicular bodies (MVBs). Mediates the association between the ESCRT-0 and ESCRT-I complex. Required for completion of cytokinesis; the function requires CEP55. May be involved in cell growth and differentiation. Acts as a negative growth regulator. Involved in the budding of many viruses through an interaction with viral proteins that contain a late-budding motif P-[ST]-A-P. This interaction is

essential for viral particle budding of numerous retroviruses.

Application Notes

The stated application concentrations are suggested starting points. Titration of the TSG101 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

Recombinant human TSG101 protein was used as the immunogen for the TSG101 antibody.

Storage

Aliquot the TSG101 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
