## Description

Ubiquitin-associated protein 2 is a protein that in humans is encoded by the UBAP2 gene. The protein encoded by this gene contains a UBA (ubiquitin associated) domain, which is characteristic of proteins that function in the ubiquitination pathway. This gene may show increased expression in the adrenal gland and lymphatic tissues. Alternative splicing results in multiple transcript variants.

## Application Notes

Optimal dilution of the UBAP2 antibody should be determined by the researcher.

## Immunogen

Recombinant human protein (amino acids D8-K868) was used as the immunogen for the UBAP2 antibody.

## Storage

After reconstitution, the UBAP2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
