### Description

The protein encoded by the UCHL3 gene is a member of the deubiquitinating enzyme family. Members of this family are proteases that catalyze the removal of ubiquitin from polypeptides and are divided into five classes, depending on the mechanism of catalysis. This protein may hydrolyze the ubiquitinyl-N-epsilon amide bond of ubiquitinated proteins to regenerate ubiquitin for another catalytic cycle. Alternative splicing results in multiple transcript variants that encode different protein isoforms. [RefSeq]

### Application Notes

Optimal dilution of the UCHL3 antibody should be determined by the researcher.

## **Immunogen**

A synthetic peptide specific to human UCHL3 was used as the immunogen for the UCHL3 antibody.

## **Storage**

Store the UCHL3 antibody at -20oC.
