Description

Planar cell polarity (PCP) is the term given to global cell polarization, such as the alignment of mammalian body hair along the anterior-posterior axis or the orientation of stereocilia bundles in the inner ear. VANGL2 is a PCP protein that is involved in the transmission of directional cues to align either individual cells within an epithelial sheet or multicellular clusters, which polarize as a group.

Application Notes

Titration of the VANGL2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 37-65 from the human protein was used as the immunogen for this VANGL2 antibody.

Storage

Aliquot the VANGL2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
